

1.4.9 Export Model

Select the Earth Model and click the small box behind the menu bar "File" - "Export Selection" to open the Export Settings Panel. Select FBX at the location of the file type. (If there is no FBX option here, you need to check FBX in the plug-in settings, open "Windows" - "Settings/Preferences" - "Plug-in Manager" in the menu bar, and check all plug-ins with the words "fbx".)

Click on the Export Selection button below and select the path named Earth. Select the other parts of the globe to perform the same operation, named Frame.
