1.2 Design of AR Recognition Chart for Painting

1.2.1 Recognition Rate of Pictures

Recognition rate of recognition graph mainly depends on the complexity and clarity of the graph, and has nothing to do with the color itself.

Although the color itself can not enhance the recognition rate, the difference between the colors can be disguised to form a graphical structure. The recognition rate of recognition graph can be guaranteed as long as the figure clarity is high enough and the shape is complex enough.
